Before the expiration of the time limit for amending the claims and to be republished in the event of the receipt of amendments.

(71) Applicant (for all designated States except US): MOLECULAR GEODESICS, INC. [US/US]; 20 Hampden Street, Boston, MA 02119 (US).

(72) Inventors; and

(75) Inventors/Applicants (for US only): CLIFFORD, Dale, Timothy [US/US]; 311 Lamartine Street, Boston, MA 02210 (US). INGBER, Donald, E. [US/US]; 71 Montgomery Street, Boston, MA 02116 (US).

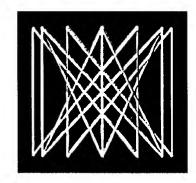

(74) Agent: ANASTASI, John, N.; Wolf, Greenfield & Sacks, P.C., 600 Atlantic Avenue, Boston, MA 02210 (US).

(88) Date of publication of the international search report: 15 June 2000 (15.06.00)

(54) Title: RADIALLY EXPANDABLE DEVICE

(57) Abstract

An expandable device is provided that includes a plurality of elongated members that are positioned and arranged to define a lattice structure having crossing points (or nodes) along interior positions of the elongated members. Preferably, the lattice structure is a hyperboloid of revolution. The device includes a plurality of flexible interconnectors located at the crossing points for securing one elongated member to another. The device is radially compressible and expandable. The device may include flexible joiner elements at that join at least two elongated members together at their ends to form an apex. The device may be used in a variety of applications including medical applications such as surgical retractors, space creators, endoluminal prosthesis, such as catheters, dilators or stents, mechanisms for expanding stents, controllably catheters, drains or valves and connectors for hollow organs. The device may also be used in building and construction applications such as emergency shelters, housing structural supports, receptacles, masts and cooling tower support structures.

Immational application No.

PCT/US 99/19457

Box	Observations where certain claims were found unsearchable (Continuation of item 1 of lifst sheet)
This Inte	ernational Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1.	Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:
2.	Claims Nos.: because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
3.	Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II	Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
	mational Searching Authority found multiple inventions in this international application, as follows:
	As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2.	As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3.	As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
	No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is estricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1-18, 20-38, 51-55, 63-76.
Remark o	The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

1. Claims: 1-18,20-38,51-55,63-76 (searched)

Use of a radially expandable and contractable device in the field of building construction and civil engineering.

2. Claims: 1,19,39-50,56-62 (not searched)

Use of a radially expandable and contractable device in the medical field.
